😊 Creating Public IP Address

1. In your VS code create a new file. Now to create a Public IP Address you need to write the script shown below.
2. Then just save it and run it.

```
07_publicIP ●
07_publicIP > ...
1    $resourceGroup="demo-RG)"
2    $location="North Europe"
3    $publicIPAddress="app-ip"
4
5    New-AzPublicIpAddress -Name $publicIPAddress -ResourceGroupName $resourceGroup `
6    -Location $location -AllocationMethod Dynamic
```

3. Once your script has run successfully then go to the portal and refresh the all resources page.
4. Here you can see your IP address.

app-interface	Network Interface	North Europe	•••
app-ip	Public IP address	North Europe	•••
app-network	Virtual network	North Europe	•••
